

# Shepherds Hut Roof Sheet Installation guide

## **IMPORTANT**

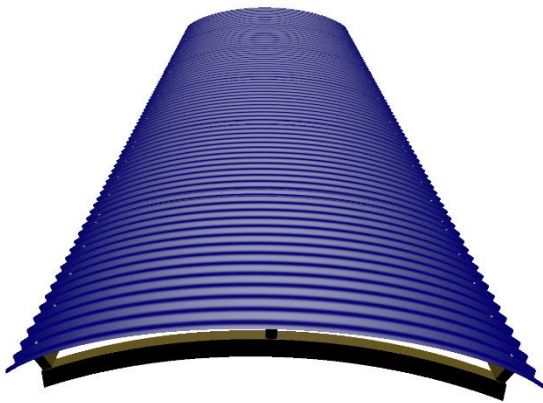

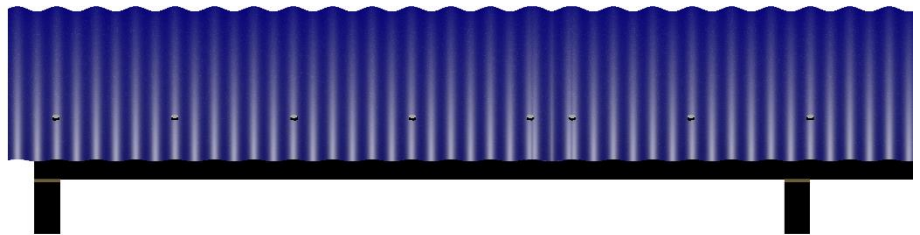

**DO NOT START FIXING FROM THE CENTRE OF THE ROOF**

1. Build your curved Framework

2. With your curved framework in place, lay out all the curved corrugated roofing sheets over the frame but do not install any fixings yet.

3. Line up the sheets on one of the edges and begin to fix the sheets at this edge only.

4. Head over to the other side of the roof, line up and fix the panels to this side of the roof.

**N.B** You may need to pull the panels down or push the panels up to ensure the gutter line runs true.

5. Once all panels are lined up and fixed at the edges you can begin to put the fixing into the central supports. Use stitch screws at 300mm centres to pull the overlaps tight together. Colour coded caps should then be used to hide and protect the screws.
